

### **Amendments to the Claims**

#### **Listing of Claims:**

Claims 1 - 9 (canceled).

Claim 10 (new). An optical module, comprising:

a circuit carrier;

a semiconductor element disposed in a housing disposed on said circuit carrier, said housing of said semiconductor element, at least in sections thereof, having a support formed thereon; and

a lens unit configured for projecting electromagnetic radiation onto said semiconductor element;

wherein said semiconductor element and said lens unit are formed in two parts, and said lens unit is supported on said support formed on said housing of said semiconductor element.

Claim 11 (new). The optical module according to claim 10, wherein said support is formed to be partially tilt-free.

Claim 12 (new). The optical module according to claim 10, wherein said support is a ring collar.

Claim 13 (new). The optical module according to claim 10, wherein said lens unit includes a base lens and said lens unit is supported on said base lens.

Claim 14 (new). The optical module according to claim 13, wherein said base lens includes a surface section formed to correspond to said support, at least in sections thereof, and wherein said surface section is positioned on said support formed on said housing of said semiconductor element.

Claim 15 (new). The optical module according to claim 13, wherein said base lens has a collar, at least in sections thereof, formed to correspond substantially to a locating face formed on said support.

Claim 16 (new). The optical module according to claim 10, wherein said lens unit includes a lens holder and said lens unit is supported on said lens holder.

Claim 17 (new). The optical module according to claim 16, wherein said lens holder includes a surface section formed to correspond to said support, at least in sections thereof, and wherein said surface section is positioned on said support formed on said housing of said semiconductor element.

Claim 18 (new). The optical module according to claim 16, wherein said lens holder has a collar, at least in sections thereof, formed to correspond substantially to a locating face formed on said support.

Claim 19 (new). The optical module according to claim 10, wherein said support is formed with a locating face, at least in sections thereof.

Claim 20 (new). The optical module according to claim 19, wherein said locating face of said support is formed with a taper from said semiconductor element in a direction of an optical axis of the optical module.

Claim 21 (new). The optical module according to claim 20, wherein said taper is conical.

Claim 22 (new). An optical system, comprising an optical module according to claim 10.
